## • APP TFA Sponge for the application of care and maintenance products

The APP TFA is a sponge for applying care and maintenance products. It is used for thorough and precise distribution of maintenance products with a varying degree of density and all types of protective coatings. It is dedicated for use on painted or synthetic surfaces, i.e. rubber, plastic, vinyl, leather, etc.

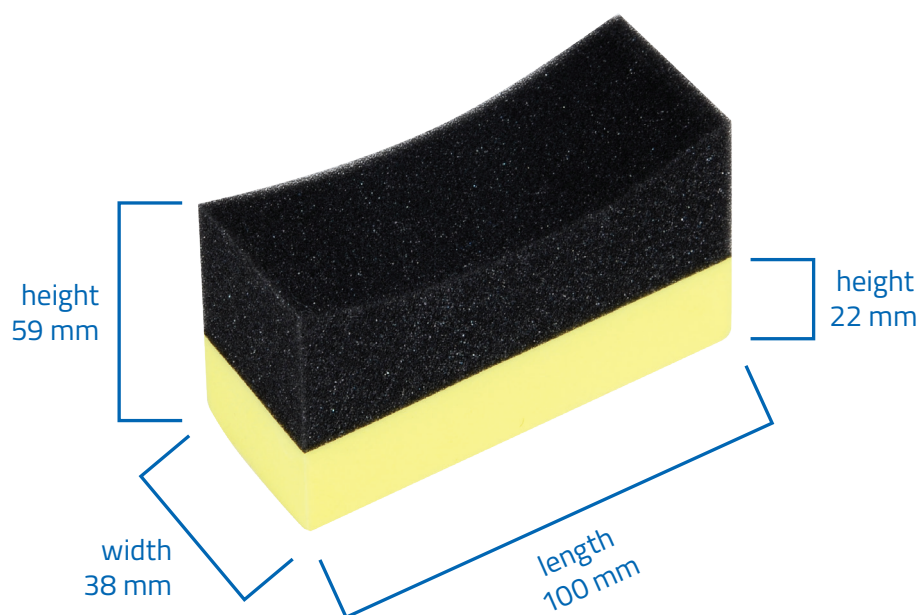

Thanks to its elasticity and soft, profiled working surface, the sponge adapts to any substrate. It forms particularly well on the side surfaces of tires. Use of the sponge is effective and cost-efficient, in addition to reducing the labor time and increasing the visual effects of performed procedures.

The APP TFA is intended for use during care and maintenance work on car interior elements and exterior bodywork parts.

**Application:** for use with care and maintenance products in the automotive, furniture and boatbuilding industries.

### Advantages:

- the preparation is applied quickly and in thin layers,
- control over the thickness of subsequent layers,
- elastic grip which improves comfort of work,
- adapts to any surface.
