7 Grit Classes **NTools** HMF 7 System

Surface Preparation End-to-end System
For Paint Shop Professionals

The first end-to-end system designed to optimize paint shops works. As for professionals it is work speed that is most crucial, as well as total control over final effects we have introduced NTools HMF 7 System that includes only 7 grit sizes of abrasive disks specially designed to ensure maximum work efficiency at any phase of work.

Secrets of durability and excellent abrasive properties offered by **HMF 7 System**

* Grit CORUNDUM based fine crystal grit – one of the toughest known minerals with specially designed layout that offers extraordinary durability of HMF 7 System.

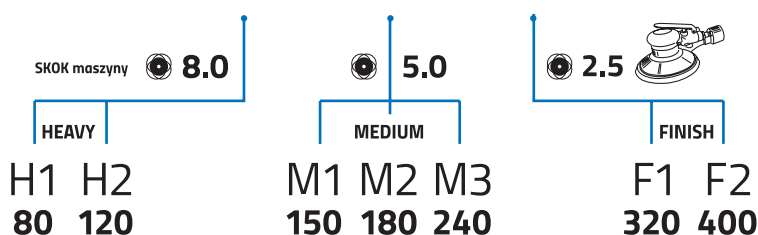

Safety – specially formed topping according to grit size

PExtraordinary durability- stearate layer that provides protection against clogging

Excellent hardness – thanks to special layout of Corundum* one of the toughest known minerals

Extended life and tear resistance – thanks to double adhesive layers and reinforced paper layer.

APP No. 40HMF080 – 40HMF400

Improved speed and efficiency

Abrasive properties of grit improve work speed whereas HMF7 System employs the innovative technique related to topping with Corundum one the toughest known minerals. Note that system features with optimized abrasive properties what eliminates risks that follows at any phase of surface sanding and any possible defects or irregularities (See the below diagram).

HMF7 System offers extraordinary efficiency as it includes only 7 grit sizes perfectly adapted to car body sanding. This solution and enhanced protection against clogging (thanks to specially designed stearate) provided for reduction of paper used during works.

7 Steps that enhance work efficiency and ensure high quality of grinded surface along with safety during works.

- H1** Coarse sanding
Removal of old top coat, rust.
- H2** Coarse sanding
Initial filler treatment.
- M1** Sanding before filling.
Filling treatment.
- M2** Old top coat sanding.
Preparation of surface for sanding.
Filling treatment
- M3** Filling finishing treatment.
Sanding before base coat application.
Cataphoresis sanding.
- F1** Sanding before base coat application.
Base coat initial treatment.
- F2** Base coat and old top coat
finishing sanding.

Total control over final effects

One of many advantages provided by this solution is total work control over final effects for the user regardless of work phase, namely coarse sanding, surface preparation or base coat finishing sanding. Use of appropriate disk of HMF7 System ensures desired effects. Consequently you can save time and material thanks to elimination of repairs or irregularities.

Evident savings

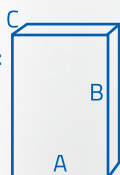

System is simple and easy in use and provides a perfect handy tool for paint shop works. For our Clients we also offer special board dedicated for HMF7 System.

The steel board may be used as handy store of packed abrasive disks or a hanger for unpacked individual disks.

Board for HMF7 System includes also classification of disks according to machine pitch and grit size. The clear diagram provides further instruction regarding dedicated use of NTools what enhances work efficiency and quality.

Our offer includes also wall mounting HMF7 System dedicated board.

Dimensions of HMF board:
A/ Width 550mm
B/ Height 870mm
C/ Depth 18mm

Board is delivered along with user manual and accessories for assembly (screws, dowels, disk holders).
